Object Name:	Description:
Std. User:	A person which owns an *account*, and thereby a *calendar*. He/she is able to create/delete/edit *appointments*
Account:	An account of setting and information on a *Std.User*. It acts as a gateway between the *calendar* and the user in the real world
Calendar:	An overview of *appointments* for one *account* after their respective *time*.
Appointment:	A digital representation of an appointment between 1 or more Std.Users. It contains a *time* and a *place* for the appointment, a title and a description for the event.
Time:	A digital representation for a date and time of that day. Relevant for *appointments* and *calendars.*
Place:	A digital representation for a place. Could be bookable or not
Participant:	How an *account* (and thereby *Std.User*) is represented in an *appointment*.
